

Vesiflo® Continues to Gain Visibility for the inFlow™ Device for Women

Redmond, WA –Vesiflo Inc.’s CEO, Kevin M. Connolly was an invited speaker and participated as a faculty member at the 2nd International Congress on Underactive Bladder- CURE-UAB held in Denver CO on Dec. 3-4, 2015. His presentation was entitled “Reinventing Bladder Drainage: The inFlow™ Urinary Prosthesis for Women and Guardian VCS”. This NIH-sponsored congress brought together academic, pharmaceutical and medical device experts to provide a multidisciplinary forum for addressing the unmet medical need for treatments of urinary voiding dysfunction specifically as it is caused by underactive bladder.

CURE-UAB
**2nd International
Congress for
Underactive Bladder**

December 3 & 4, 2015
Location: Grand Hyatt Denver, 1750 Welton Street, Denver, Colorado, USA
See the back for information on abstracts, travel scholarships, and the UAB technological showcase!

Beaumont® | HEALTH SYSTEM | The Underactive Bladder FOUNDATION

In October 2015, Vesiflo participated in the American Urogynecologic Society (AUGS) and Society of Urology Nurses and Associates (SUNA) meetings. Physicians and nursing specialists treating patients with impaired bladder function attended these society meetings. Again, Vesiflo’s booth was well attended by meeting participants and over 100 additional physicians and nursing leads were added to our growing list of interested clinicians with patients.

The above mentioned meetings add to the interest that Vesiflo generated at its first post inFlow FDA approval scientific meeting, the American Urological Association in May 2015, and at the Consortium for Multiple

Sclerosis Centers later in May. All totaled we have generated interest from over 700 physicians at these meetings who believe they have patients who could benefit from the inFlow.

inFlow Launch Plan Update

The Company is in the midst of manufacturing a second generation Activator (remote control) that operates the inFlow device. The Company plans to open its pilot marketing phase early in 2016 with a targeted launch in several regional markets, also in 2016. Although this is a later launch plan than previously anticipated, the Company will have redesigned and manufactured its second generation Activator which is more ergonomic, has remote monitoring capabilities and interfaces to Vesiflo’s iOS app, Take Control. We believe this re-design will better serve patients. Vesiflo plans to launch the inFlow in a stepwise fashion, starting regionally to build sales traction and then targeting a full national launch. Following US launch and in conjunction with sufficient manufacturing volume, the Company plans to focus on certain international distribution relationships to launch outside the U.S.

About Vesiflo

Vesiflo, Inc. is dedicated to reinventing bladder drainage. Due to their acute need, our initial focus is on improving the lives of women with impaired detrusor contractility, a condition where the bladder is permanently impaired by neurologic disease or injury (MS, stroke, spina bifida, diabetes, etc.). We also plan to add related products, including patient monitoring capabilities, through internal development and acquisition. Learn more at www.vesiflo.com. ###
